

TANVI VERMA

Flutter Developer | Mobile Application Engineer | AI-Assisted Development
Ghaziabad, UP, India • tanviverma2508@gmail.com • linkedin.com/in/tanviverma-955134201

PROFESSIONAL SUMMARY

Results-driven Flutter Developer and Mobile Application Engineer with 4+ years of experience building scalable, high-performance cross-platform apps for Android and iOS. Proven expertise in end-to-end mobile product delivery — from architecture and REST API integration to Play Store & App Store publishing and client coordination. Proficient in Dart, Kotlin, and Java, with hands-on experience in GetX, Riverpod, and Provider state management, Hive local database, and Firebase services. Leverages modern AI development tools (Lovable, Emergent, Stitch, Claude, Gemini Flash) and vibe coding workflows to accelerate delivery and maintain high code quality.

TECHNICAL SKILLS

Languages: Dart, Kotlin, Java

Frameworks & SDKs: Flutter (Cross-Platform), Android SDK

State Management: GetX, Riverpod, Provider, setState

Networking: REST APIs, Dio, HTTP

Local Storage: Hive, SharedPreferences, SQLite

Cloud & Backend: Firebase (Push Notifications, Crashlytics, Analytics, Realtime DB), Git, GitHub

Media: ExoPlayer (Adaptive Streaming, Fullscreen, Seekbar)

Deployment: Google Play Store, Apple App Store, CI/CD basics

Architecture: MVC, MVVM, Clean Architecture

Tools & IDEs: Android Studio, VS Code, Postman, Figma

AI TOOLS & VIBE CODING WORKFLOW

AI Dev Tools: Lovable, Emergent, Stitch, Claude, Gemini Flash, Antigravity

- Build and prototype Flutter apps using Lovable, Emergent, and Stitch for rapid UI scaffolding, screen generation, and full-stack prototyping from prompts.
- Use Claude and Gemini Flash for code generation, debugging, architecture planning, and REST API mapping — improving development productivity by 40-50%.
- Apply vibe coding methodology to go from idea to working Flutter prototype in hours using AI-generated boilerplate, widget trees, and state logic.

PROFESSIONAL EXPERIENCE

Software Development Engineer II (SDE-2) | Proeffico Solutions Pvt. Ltd.

Noida, UP • Jan 2024 – Present

- Architect and lead cross-platform Flutter applications for Android and iOS, owning the full lifecycle from requirement analysis to production deployment.
- Build scalable app architecture using GetX and Riverpod state management, ensuring clean separation of concerns across enterprise codebases.
- Integrate REST APIs via Dio with structured error handling, interceptors, and token refresh logic, improving API reliability and reducing runtime failures.
- Implement offline-first features using Hive local database, enabling uninterrupted app usage in low-connectivity environments.
- Resolve Android 13/14 compatibility issues — permission model updates, scoped storage migration, and foreground service constraints.
- Manage end-to-end releases on Google Play Store and Apple App Store — build signing, staged rollouts, and monitoring via Firebase Crashlytics.
- Lead client requirement discussions, translate business goals into technical specs, and coordinate cross-functional teams for on-time delivery.

Associate Software Engineer | Proeffico Solutions Pvt. Ltd.

Noida, UP • Jul 2023 – Jan 2024

- Developed enterprise mobile modules for VMS and HRMS platforms: attendance tracking, live location tracking, leave management, and employee self-service.

- Built Notice Board, Resource Bank, To-Do List, and Service Request modules with full CRUD operations and real-time data sync.
- Integrated AI-powered face recognition attendance system with Flutter mobile interface for contactless biometric verification.

Associate Software Engineer Intern | Proeffico Solutions Pvt. Ltd.

Noida, UP • Mar 2022 – Jul 2023

- Contributed to Android and Flutter feature development using Kotlin, Java, and Dart for production mobile applications.
- Supported bug fixing, performance profiling, Play Store deployments, and Agile ceremonies under senior developer mentorship.

Android Developer Intern | LetsGrowMore

Remote • Sep 2021 – Oct 2021

- Developed Android application features using Java and Android SDK; implemented UI components and activity lifecycle management.

KEY PROJECTS

On-Demand Service Booking App (Flutter | Dart | GetX | Dio | REST API)

- Built a Snabb-it-inspired service booking app with Flutter — category browsing, real-time provider availability, slot booking, and in-app status tracking.
- Implemented GetX state management for cart and booking flows; Dio for JWT-authenticated API calls with token refresh handling.

Netflix-Style Video Streaming App (Native Android | Java | ExoPlayer | RecyclerView)

- Built a native Android streaming app in Java with ExoPlayer for adaptive video playback — buffering control, seekbar, fullscreen mode, and background audio.
- Implemented RecyclerView content carousels, ViewPager2 banner transitions, and Glide for optimised image loading, replicating the Netflix browsing experience.

WhatsApp Clone (Native Android | Java | Firebase Realtime DB | Firebase Auth)

- Built a native Android messaging app in Java with Firebase Realtime Database for instant delivery, Auth for login, and RecyclerView-based chat UI with read receipts.

Student Management System (Flutter | Riverpod | Hive | CRUD)

- Developed a cross-platform student records app with Riverpod state management and Hive local storage with full CRUD, search, and filter functionality.

EDUCATION

Bachelor of Technology (B.Tech) — Computer Science & Engineering

H.R. Institute of Technology, Merta, Ghaziabad • 2019 – 2023

CERTIFICATIONS

- Generative AI Workshop — Outskill
- AI Tools Workshop — Be10x
- Compete with Code — Programming & Competitive Coding
- Data Structures with Java — Core Algorithm Foundations
- Super Growth Summit — Product & Engineering Leadership
